NORTH CAROLINA ANNUAL CONFERENCE DISASTER RESPONSE PLAN

Do Good

Do No Harm

Stay in Love with God

Our Conference Disaster Response Plan is designed to be a living document. It serves as a guide - for the conference, districts, local churches, clergy and all those who find themselves within our annual conference - to plan for, respond to and recover from a disastrous event. The NC Conference Disaster Response Committee (NCCDRC) will evaluate, practice, and critique the plan annually. Any additions, deletions, and updates without budgetary implications will be made by the committee and shared with the Annual Conference.

PURPOSE

- To prepare for, coordinate and implement a conference-wide disaster response.
- To resource and equip local United Methodist churches and districts as they assist their communities and individuals to prepare for, respond to and recover from disaster. Reference Appendix
- To provide immediate relief for human need and to respond to the suffering of persons in our communities caused by disasters.
- To work cooperatively with faith-based and other non-profit organizations, and with governmental disaster response agencies in planning and implementing disaster response ministries on behalf of the North Carolina Conference of The United Methodist Church.

What is a Disaster?

A disaster is an event that negatively affects life, property, livelihood or industry, often resulting in permanent changes to human societies, ecosystems and environment. "Natural or civil disasters are interruptions of such magnitude that they overwhelm a community's ability to recover on its own." Not all disasters which overwhelm a community's ability to respond are state or federally declared, which paves the way for public and/or individual household assistance. While disaster response may rise to the county, state, regional or federal levels, disasters are always experienced "locally." Thus, disaster response always begins locally.

THE FIVE STAGES OF A DISASTER

Readiness – The Readiness phase includes training, planning, practicing and equipping for any disaster. A disaster plan should be developed during this phase and teams should be trained and equipped. Preparations are made and precautions are taken for potential events, including evacuation.

Rescue – The Rescue phase incorporates the time for first responders to do what they do best. Among other emergency response activities, public responders work towards the preservation of life and property. While we are not first responders, the Conference Disaster

Response Committee Ministries monitors, assesses, and possibly stages equipment or response during this phase.

Relief – The Relief stage includes crisis intervention, emergency assistance, provision of shelter and housing, distribution of food and clothing, beginning the clean-up process (with ER Teams), assessment of the extent of damage and planning for long term recovery if needed.

Recovery – Survivors are assisted in rebuilding their structures and lives in the Recovery phase. They are also helped in adjusting to the "new normal."

Review – The Review phase is an intentional period following the relief and recovery phases where all actions are reviewed and ways to improve future readiness and response for the next disaster are considered.

DISASTER TIMELINE

The "Rule of Ten" - In general, a given phase of a disaster is ten times as long as the previous phase. For example, if the rescue phase lasts 1 day, the relief stage will last 10 days and the recovery phase will last 100 days.

GENERAL STRUCTURE

The Conference Disaster Response Committee is structured to develop, assist, and implement a comprehensive disaster plan for the North Carolina Conference of The United Methodist Church (NCCUMC). This committee is composed of clergy and laity. There is interaction and coordination between the [NC Conference Disaster Response Committee](#) (NCCDRC) and other conference agencies, boards and leadership. The Conference Disaster Response Coordinator leads this committee. There will be a variety of roles and responsibilities within the Conference Disaster Response Committee that will be established and implemented prior to and at the time of an event.

Each district will have two (2) District Disaster Response Coordinators (DDRC) who are part of the NCCDRC. Within each district, a specific disaster preparedness and response plan should be established and reviewed with its constituents. The NCCDRC can be a resource to assist with the plan development. Each church should have a Local Church Disaster Response Coordinator (LCDRC). Within each local church, a specific disaster preparedness and disaster response plan should be drafted and tested. Here again, the NCCDRC/DDRC can be a resource with plan development.

RESPONSIBILITIES

Disaster preparedness and response can be very specific for each event and location. However, the following responsibilities are common to most situations.

I. **EVERYONE – Regardless of your role or position**

APPENDIX F – STEP BY STEP RESPONSE / CONFERENCE CALL CENTER

Disasters are experienced and responded to initially by local volunteers –trained and untrained. UMCOR ‘Connecting Neighbors’ Training can prepare local church volunteers to better assist their neighbors

In the aftermath of a disaster District Coordinators will begin to assess damage within their District. If the call center receives a request for assistance prior to the establishment of ERT Response Centers, the request with pertinent information is forwarded to the Disaster Ministries Call Center and CDRC. The CDRC then assigns the request to the appropriate DDRC.

The DDRC verifies the request with the survivors and determines the appropriate level of response:

- a. If the first level of response – Neighbors assisting neighbors [Community Response] is adequate then the DDRC reports this back to the CDRC and monitors for future developments.
- b. If assistance is needed to help the community, the DDRC contacts an ERT (Early Response Team) from within their District. [DDRCs will each be provided the list of ERT team leaders in their district.] It should be noted that ERTs may self-deploy in their locality (District) when local authorities determine it is safe to do so. These deployments and any damage observations should be reported to the District Coordinator to help identify any pockets of damage that might otherwise be missed.

If the extent of the need appears greater than can be handled within the District then the DDRC contacts the CDRC to request ERTs from another district.

The CDRC will coordinate the assignment of teams from other districts and may involve DDRCs from other districts to help coordinate. The CDRC is solely responsible for inviting ERTs from outside the NC Conference.

The DDRCs will assist in the damage assessment used to direct the work of ERTs and assist in the development of on-site resources. They may be assisted in this effort by ERTs who have completed the ERT Site Assessment course at the discretion of the CDRC.

If the cumulative storm damage warrants the establishment of one or more ERT Response Centers, the CDRC will guide the establishment of the centers and the role of the Call Center will include scheduling of ERTs in coordination with the CDRC. In no case should the call center assign an ERT directly to a damaged home.

ERT work is to be assigned and directed by the DDRC or a designated Site Manager. The CDRC will provide guidance about housing capacities, availability of kitchen equipment, availability of showers, etc. so the Call Center can communicate effectively with teams about needs in the field and available response sites.

Appendix G: Role of ERTs

In most cases, the local church provides the first response following a disaster. This basic understanding—that disaster response is local—forms the foundation for NCCUMC’s Disaster Response Plan as well as UMCOR’s national training and response model. The goal is to equip United Methodists to prepare for, respond to and recover from disasters.

Disaster Response Training

Local churches, districts and conferences can request training to help them learn how to prepare for and respond to local disasters. These training programs address resilience against unpredictable weather, urgent and rapid response after a disaster and ministry options for communities bracing for a long recovery. Available trainings include but are not limited to: Basic ERT Training, ERT 200 Classes (detailed to specific tasks or situations), Neighbors helping Neighbors, and more.

Embedded in all UMCOR training is the underlying message of love and hope that The United Methodist Church offers through Jesus Christ. Because of who we are, UMCOR’s trainings embrace a ministry of presence—a loving recognition that spiritual bruises and emotional scars matter as much to us as broken doors and windows.

Early Response Team Training

Early Response Teams (ERTs) fill a specific need in the early days after a disaster to clean out damaged homes, remove debris, place tarps on roofs and otherwise help to prevent further damage, while providing a caring Christian presence. They do not perform permanent repairs.

Under very specific guidelines, ERTs assist survivors without causing further harm or being a burden to the affected community. ERTs require an invitation to travel to another district, conference or jurisdiction. ERTs are not a first-response group of emergency workers, nor are they recovery, rebuild or repair teams.

All ERT members are trained by authorized UMCOR trainers and are given identification badges as evidence of a successful completion of the basic class. Badges require a background check and are valid for three years. There are advanced level classes available for badge renewal. ERTs may self-deploy locally and are otherwise deployed at the request of the CDRC, Conference ERT Leader Coordinators, District Response Coordinators, or Site Managers designated by the CDRC.

Appendix H: Inventory of Available Equipment and Supplies

The Director of Disaster Ministries, or in the absence of that position, the CDRC shall assure that a dynamic inventory of equipment, team leaders, and pre-deployed disaster supplies is kept (asset mapping). These lists may be maintained by a designee and should be available to the Disaster Response Committee when needed. Since the asset mapping is a dynamic process with frequent changes it is not published in this plan.

Appendix I: How to Best Deal with Mold and Mildew after a Hurricane / Flood

Homeowner and Volunteer Guidance

After many years of dealing with the aftermath of storms we have learned some valuable lessons about mold removal and prevention. Standing water and wet materials are a breeding ground for microorganisms, such as viruses, bacteria, and mold. They can cause disease, trigger allergic reactions, and continue to damage materials long after the flood. This tip sheet outlines some key findings and suggested steps:

1. The key to mold control is moisture control. If mold is a problem in your home, you should clean up the mold promptly *and* fix the water problem. It is important to dry water-damaged areas and items that can be salvaged. All contaminated (wet) items that cannot be cleaned and dried completely should be removed and disposed of. The sooner mold is dealt with the less chance it has to grow and spread.
2. Visible mold should be removed using water and detergent. BLEACH WILL NOT KILL MOLD TO THE ROOTS EXCEPT ON IMPERMIABLE SURFACES. THERE ARE BETTER WAYS TO DEAL WITH MOLD (see steps below). Other home remedies like vinegar and peroxide are also not the preferred way to deal with mold issues.
3. While working on mold and in the vicinity of the mold you should wear protective goggles, filtration masks (N-95), gloves, long sleeve shirts, long pants, and waterproof boots to prevent contact with the mold. When you are finished working shower as soon as possible to prevent spreading mold spores.
4. Dry the structure. The most important part of mold removal and prevention is to control moisture. If there is a source of moisture (leak) it should be fixed at least temporarily as part of the drying process. If power is available air should be circulated to aid in the drying process. Please remember not to use generators indoors!
5. As the structure begins to dry, it is time to treat the area. The best way to kill mold and mildew is to treat areas with an EPA-registered mold and mildew disinfectant. These specially formulated disinfectants will kill mold spores at their roots, preventing them from reappearing over and over again. Through our experience we have identified the following easily available and safe to use products:
 - a. Shockwave - this is the product we use in United Methodist Disaster Response on our spray trailers.
 - b. Concrobium - another product that kills mold to the roots

In both cases the application inside the home is by spray to the previously wet areas. Masks, gloves, and protective suits (Tyvek) are advised during application. Following application you should leave the property for at least four hours. These products can also be applied in crawl spaces by using a misting device. These items can be purchased online and in home improvement stores. A spray team with disinfectant, sprayers, and misters may be available through the District Disaster Response Coordinators.

6. Covering impacted areas with paint, wood, or other material does not prevent mold growth. It is important to give attention to the mold prior to rebuilding. Remember the key to controlling mold growth is moisture, so do not rush the drying process.
7. Both FEMA and Insurance Companies advise homeowners to take pictures prior to any repair work. You should also keep receipts for any out of pocket expenses. This will provide evidence to adjusters and assist you with any future claims.
