## Introduction

### What is an eBook?

eBooks are electronic books. The publisher of the paper version of the book (if there is one) chose to release the same book to readers as computer files. These files are in a certain format that can be read by certain e-reader devices. More on those later.

### Why would I want to read one?

- **Portability** – eBook devices allow you to carry hundreds of books with you at all times. They often weigh less than one hardcover book and take up less space.
- **Convenience** – An eBook can be available to you moments after you decide you want it. Just buy it online, download it, and read it right away.
- **Notes Feature** – Most e-readers provide a feature that allows you to highlight passages and make notes on them. This feature makes your favorite passages available to you at all times.
- **Accessibility** – Adjust the text to the size you need or even have your device read it to you.
- **Cost** – eBooks generally cost less than paper books and many are offered for free or on sale for a limited time.

### What are eAudiobooks?

eAudiobooks are electronic files of a paper book being performed by a reader or a cast of readers. Audiobook readers are usually actors or authors who are performing the text in the book as opposed to a computerized text reader that uses a monotone voice. Audiobooks are normally published on CD and many publishers are now offering them as digital files that can be downloaded to your computer or eReader.

### Why would I want to listen to one?

- **Portability** – Listen to eAudiobooks as you would listen to music on your portable device – while running, commuting, cleaning, sleeping, etc.
- **Convenience** – Download eAudiobooks instantaneously and have your whole collection available to you anywhere you are.
- **Bookmarks** – Your eReader will save your spot so the next time you are ready to listen, it will pick up right where you left off.
- **Cost** – eAudiobooks generally cost less than CD Audiobooks because the publisher saves on the cost of printing and packaging CDs.

### eReaders

You may have heard of portable, dedicated eReader devices that you can use to read eBooks. However, you do not need to own one of these to read eBooks. eBooks can be read on your computer or on your smartphone, too. eBooks come in a variety of file formats and you will need the correct software for each one. Let's look at the most popular formats first.

- AZW – for use on Kindle devices
- BBeB – for use on Sony eReaders
- EPUB – for use on most eReaders, but not the Kindle
- PDF – to be read using Adobe Reader

The main difference between formats is the device that you need to use to read them. Many eBooks are published in multiple formats. Now, let's look at the most popular eReader devices.

#### Kindle

Amazon's Kindle is a portable, dedicated eReader that you can use to read Kindle eBooks in their proprietary AZW format. The newest addition to the line, the Kindle Fire, has added a color screen and the ability to download apps much like a tablet computer. However, you do not need to own a portable Kindle to read Kindle eBooks. Amazon offers a free desktop application that you can download to your computer, as well as free smartphone apps that can be used to Kindle eBooks.

#### Nook

Barnes & Noble competes with Amazon's Kindle with their Nook. The Nook Color was the first dedicated eReader to come with a color display, a big bonus for children's books and magazines. The Nook Color is similar to the Kindle Fire, operating more like a tablet computer with apps that can be downloaded to perform a wide variety of tasks. Some prefer the Nook because it uses the EPUB format that is not proprietary.

## **Sony & Kobo**

Behind Kindle and Nook in the eReader market come the Sony Reader and the Kobo Reader. These readers also support EPUB, although the Sony Reader also supports its own proprietary file format, BBEB. For a comparison matrix that considers many features such as the size, weight, technology, and price of all eReaders, see the MobileRead Wiki at [http://wiki.mobileread.com/wiki/E-book\\_Reader\\_Matrix](http://wiki.mobileread.com/wiki/E-book_Reader_Matrix).

## **Your Smartphone or Tablet Computer**

Most smartphones, including the iOS and Android systems, can download apps that allow the user to read eBooks. Amazon, Barnes & Noble, and Apple all have such apps available. The benefit of using your smartphone or tablet computer is the accessibility to multiple file formats using multiple apps. However, there are several downsides including screen size and technology, memory storage, and cost of the device. The main difference may be that most dedicated eReaders use eInk technology making the experience very similar to reading paper and so it is easy on the eyes. Although the LCD screen of a smartphone or tablet computer may put more strain on your eyes and be impossible to read in sunlight, the screen is backlit to read in the dark.
